How to Draw ROCKETS & ROBOTS
Roll & Draw

Why use Roll & Draw Sheets?
I like the concept of the roll and draw sheets, because it challenges students to try a drawing in an unexpected way. The element of surprise and challenge can motivate reluctant drawers to give it a try, just to see what the outcome will look like.

What kind of Dice?
I highly recommend the use of foam dice. They are silent, for one thing, and the students really like them. The only downside, is that I have to remind them not to poke the dice with their pencils. Another alternative is “eraser dice”.

Dice can be found on Amazon’s website.

Setting up the Room:
I try to have a set of 1 dice and 1 sheet for every 1-2 students. For example, my tables hold 4-6 students, so I put 3 dice and 3 drawing sheets at each table. This just saves on copies and buying dice. Most students actually like sharing the set, so they can watch what the other person rolls, and they can also share what they got. I remind them in the beginning, that even though they are sharing the dice, they each get to make their own rolls, so their drawings should not look the same.

Ways to use the Roll and Draw Sheets made by Expressive Monkey:
Some teachers use them at an art center, for students to choose from during center time, or if they finish early on their regular art lesson.

Some of the roll and draw sheets are designed to make some kind of animal or character. With this kind of sheet, students could make several animals or characters to be included in their drawing. Or students could make 2-3 drawings in their sketchbooks and pick the one they like best to be the main character in their drawing.

Some roll and draw sheets are designed to set up an entire work of art. For this type of dice drawing sheet, you can decide what media you would like your students to use. It could be a quick one day picture with dry media (maybe done with a sub). Or paint and mixed media could eventually be used to give it a more finished look.

Enjoy!

Expressive Monkey
Instructions

Use the How to Draw sheets to help boys and girls draw a rocket or robot. The How to Draw sheets have one step-by-step example on the left with more choices in the boxes to the right of each step.

This is a great reference page for more advanced drawers that would like more choices for drawing a robot.

Take a look at Expressive Monkey's Blog Post about Robots to see some robot art lesson ideas.

This How to Draw sheet for a space rocket gives instructions for making a 3D looking window that can be filled with the face of a passenger. This sheet is for more advanced drawers.

The Roll & Draw Sheets can be used as a fun activity for early finishers.
Start with an oval for the head and body.
Roll the dice to see what kind of eyes, mouth, arms, legs and controls to add.
Pick a radar to put the side of the head.
